## COURSES

- **Full Stack Dev at Coding Ninja**
- **Sep, 2022 - Present**

## CYBERMATRIX SOLUTIONS PVT LTD, NOIDA

FullStack developer developer

Oct, 2022 - Present Noida

- **Projects**
  - **Digiexchange** (( October 2022- Jan 2023 ) as ( Full Stack Developer )
    - the project was based upon communication between software solution providers and clients where solution providers can post there about their solution and its feature whereas interested clients can see all the solutions and can buy them.
    - Technologies that I have used, Next.js, Firebase messaging, node mailer for sending email and for fetching APIs users Axios
    - For the backend, I have used Node js with the express framework and used PostgreSQL SQL for Database but with sequelize so can use them as Model base projects like MongoDB but with relations
  - **CureKiind** ( November 2022 - Feb 2023 ) as ( Full stack developer )
    - It's a CMS for healthcare Camp management System for registering various camps across India and enrolling new patients and generating their reports and maintaining them for further use,
    - technologies that I have used, Next.js, and Context API for managing data globally across the process .
    - For the Back-end used Node Express with JWT Authentication Used Sequelize and MySQL Db for managing DB managing the hierarchy of every user on the bases or roles using role permission in the front end as well as in the backend
    - implemented dynamic column field in db so that user can create multiple fields in any form as per the needs
  - **LeadShine** ( December 2022 - Present ) as ( Full stack developer )
    - It's a SASS CMS based on Multi-tenant, where each client has its own database managing its own system and has one common db maintaining all the clients
    - only using one code base system maintaining all the database dynamically and its users
    - technologies that I have used, Next.js, and Redux Toolkit for managing data globally across the process, MUI framework for responsiveness
    - For the Back-end used Node Express with JWT Authentication Used Sequelize and MySQL Db for managing DB and made my own Resolver for counting Multiple Db, also implement role-based permission and client base permission system
